

Methanesulfinic Acid Sodium Salt

Alfa Aesar[®]
A Johnson Matthey Company

The high purity alternative

The methyl sulfone group is present in a number of pharmacologically active molecules. Traditional methods of synthesis often involve nucleophilic attack with the malodorous methylmercaptide, followed by oxidation. Alfa Aesar offers Methanesulfinic acid sodium salt, 97%, which can react with electrophilic carbon atoms to form methyl sulfones in a single step.
